

Cover Fabrics for HD Balance

HD Balance has several fabric-covered details such as cushions, armrests, and side supports. Many accessories are also covered with various types of fabric. Fabrics in this info sheet are those that are used most for HD Balance.

Trevira

The Trevira CS-fabric comes in two variants, grey (A) and black (B). Both are washable at 60°C. These fabrics are used for cushions and some accessories, for example, headrests.

Grey

The grey Trevira CS-fabric is the standard cover fabric for HD Balance. The fabric has a structured surface and a color combination that remains attractive under long term use.

Black

Black Trevira CS-fabric is available as an alternative. This fabric has a smoother surface than the grey.

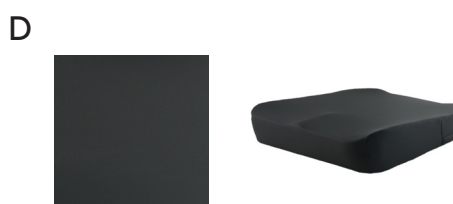

Dartex

Cushions and certain covered accessories are available in Dartex (C) which is a flexible, water-proof, and wipe-able material. Dartex is also washable at 60°C.

Hygienic covers

Hygienic covers (D) are available for the seat cushion and are made of a material similar to Dartex. Compared to the Dartex cover the Hygienic cover has fewer seams, and the seams are welded to prevent leakage. The zipper is hidden to further protect the cushion. Hygienic covers can be wiped clean and are washable at 60°C.

Vinyl (Soft)

Calf supports, armrests, standard side supports etc. are covered with soft vinyl material (E). It is a black leather-like material that is easy to wipe clean.

Washing advice

For more complete information regarding maintenance of the different materials refer to the Maintenance Schedule, art.nr. 95730-1.
